**Subject:** Jaffaric Development Application

To Whom It May Concern:

I understand that there is an upcoming City of Vaughan Council Meeting today regarding the Jaffari development application at the OMB.

I am a resident of Thornhill Woods, a close neighbour to this development. I am strongly concerned about their application to have high rise buildings and add multiple other buildings on the property that would make it a high density area. I believe this area is zoned for low density, which would be in keeping with the feel of our neighbourhood. I have a very young family and am concerned about the safety of my children due to high traffic flow through our neighbourhood with the addition of this development as it is currently proposed. On the proposed map there are exits into Thornhill Woods from the development which will absolutely mean increased traffic. Entrances and exits to the development should be primarily off of Bathurst street, not through Thornhill Woods. There is already significant traffic congestion in the area which is making it more difficult to get to work and school. Drivers do not obey speed limits and make it unsafe for our children, more will only compound the problem. In addition, our children's education is of such importance. There are concerns as to whether the current schools can handle a higher than expected density. Children in Thornhill Woods already, should not have to learn in overcrowded schools. The applicant is welcome to develop the land, but it must be in keeping with our community - low rise and low density.

Thank you,  
Esther Lieberman
