

Project: Maplewood Booster Pumping Station (VAU-009)

Updated: March 22, 2018

Description:

A booster station is a pumping station that boosts the pressure of water moving through a long pipe so that it can continue to travel through the pipe for an extended distance.

The project consists of the upgrade, repair and rehabilitation to the station and the station's controls to improve its overall functionality.

Benefits to Community:

Improving this pumping station will address water pressure issues experienced by residents in North Maple. It will also increase the efficiency of the station thereby reducing operational costs.

Maplewood Area Affected

Pumping Station
